

This document track the time I spent to design, develop and maintain my Company's Website "BAC Software Consulting". The Website is written in XHTML, XML, CSS, JavaScript and Flash CS3/AS 3.0. Photoshop CS3 was also used. XHTML, XML, CSS and JavaScript were initially written using TextPad text editor and then later Notepad++ text editor for windows. Also the 'code view' window in Dreamweaver CS3 was used.

Also, this document tracks the time I spent designing, developing, and maintaining my Company's Website as a Flash format (Flash movie). Flash CS3 authoring tool was used along with ActionScript 3.0, XML and PHP. Along with XHTML, and Photoshop CS3. Total for this Flash Website = **99.5** hours

Additionally, this document tracks the time I spent updating my Blog -- <http://bacsoftwareconsulting.com/blog/> -- This is the time I spent after finishing the Introduction to WordPress course.

Starting from April 16, 2010: Total time for the Blog = **88.75** hours.

**SEARCH ENGINE OPTIMIZATION** - Its role is to identify the strategically defined keywords and phrases that will drive the most qualified traffic to your Website. Resolve existing technologies on the Website that may hinder search engine visibility. Strategically optimize the Website's content and Meta data to correlate with search engine algorithms.

**Google AdSense** is a program enabling online businesses to earn revenue from serving ads precisely targeted to specific web content and search pages. A broad universe of sites profit from AdSense, with service levels ranging from online sign-up to dedicated support management. Google's thousands of advertisers also benefit from AdSense by gaining exposure on sites across the Google Network, including AOL, Ask.com, Lycos, and EarthLink.

**Google Analytics** is the enterprise-class web analytics solution that gives you rich insights into your Website traffic and marketing effectiveness. Powerful, flexible and easy-to-use features now let you see and analyze your traffic data in an entirely new way. With Google Analytics, you're more prepared to write better-targeted ads, strengthen your marketing initiatives and create higher converting websites.

-----  
Compression reduces response times by reducing the size of the HTTP response. Gzip is the most popular and effective compression method currently available and generally reduces the response size by about 70%. Approximately 90% of today's Internet traffic travels through browsers that claim to support gzip.

Gzip is the most popular and effective compression method at this time. It was developed by the GNU project and standardized by [RFC 1952](#). The only other compression format you're likely to see is deflate, but it's less effective and less popular.

Gzipping generally reduces the response size by about 70%. Approximately 90% of today's Internet traffic travels through browsers that claim to support gzip. If you use Apache, the module configuring gzip depends on your version: Apache 1.3 uses [mod\\_gzip](#) while Apache 2.x uses [mod\\_deflate](#).

| Friday June 20, 2008    | 7.25 | <b>Working on Designing and Developing</b> my Company web Site ( <i>BAC Software Consulting LLC</i> ).  |
| Sunday June 22, 2008    | 8.0  | <b>Working on Designing and Developing</b> my Company web Site ( <i>BAC Software Consulting LLC</i> ).<br><br><b>IMPORTANT:</b> The HTML Guardian version 7.5.3 is compatible with IE6 and IE 7, Safari 3, Mozilla/Firefox 2 and Opera 9 (specifically Opera 9.27& less). But when I upgraded to Opera version 9.5, the JavaScript encryption did not work anymore, Opera produced many errors, not recognizing functions, etc. So obviously this was a compatibility issue, that is HTML Guardian version 7.5.3 is not compatible with Opera 9.5. Once I upgraded to HTML Guardian version 7.5.8 the encrypted JavaScript code in Opera works fine in addition to the other browsers. In conclusion, when I upgrade to Mozilla/Firefox 3, or IE 8, or later versions of Safari. I need to make sure that my encrypted JavaScript code still works without any Errors.  |

|                          | 0.75 | <b>FLASH Website: Miscellaneous</b> updates and fixes to the Website.  |
| Saturday April 17, 2010  | 1.25 | <b>BLOG: Added</b> reCAPTCHA plugin to the Website's comments in order to prevent spam.  |
| Sunday April 18, 2010    | 3.25 | <b>BLOG: Adding</b> a new Post: "Why Small Businesses must have a Website" and other changes.  |
| Monday April 19, 2010    | 5.0  | <b>BLOG: Added</b> a new Post: "Why a Website is Essential for Small Business".<br><b>NOT Fixed:</b> the Comment section of the post. It was not working right in IE8, but was working fine in other browsers (When I click Submit in IE with empty required fields (either one of them, and e-mail has to be valid too) I got an error in <a href="http://bacsoftwareconsulting.com/blog/wp-comments-post.php">http://bacsoftwareconsulting.com/blog/wp-comments-post.php</a> : <i>The website cannot display the page ... HTTP500 error</i> . In other browsers it will display the appropriate error message. Something like reference (but for IE8 and Wp2.9.2):<br><a href="http://core.trac.wordpress.org/ticket/7890">http://core.trac.wordpress.org/ticket/7890</a><br><b>Submitted</b> a help post at:<br><a href="http://wordpress.org/support/topic/389460?replies=1#post-1482852">http://wordpress.org/support/topic/389460?replies=1#post-1482852</a> |
| Tuesday April 20, 2010   | 4.25 | <b>BLOG: FIXED:</b> the Comment section of the post is not working right in IE8, but was working fine in other browsers<br><b>Submitted Issue</b> at:<br><a href="http://wordpress.org/support/topic/389460?replies=1#post-1482852">http://wordpress.org/support/topic/389460?replies=1#post-1482852</a><br><b>Added</b> a New post about the above issue.   |
| Wednesday April 21, 2010 | 1.75 | <b>BLOG: Adding</b> a New 'Resume' static page.  |

|                          |      |   |
|--------------------------|------|---|
| Wednesday April 21, 2010 | 0.75 | <b>BLOG: Added</b> a New 'Resume' static page.  |
| Monday April 26, 2010    | 6.0  | <b>Installed:</b> Mozilla Thunderbird Email Client. <b>Set it up</b> to connect to the Web Email server (incoming and outgoing).<br><b>Thunderbird</b> is a free, open-source, cross-platform application for managing email and news feeds. It is a local (rather than a web-based) email application that is powerful yet easy-to-use.<br><b>Setup Custom Reports in Google Analytics</b> (for all 4 domains) and scheduled automatic email forwarding (on a daily, weekly, monthly or quarterly basis).<br><b>Custom Reporting</b> is a feature that lets you design a report containing the information you want to see. You can also organize dimensions and metrics to get a specific view of your data. This way, you don't need to wait on us to create a report that will fit your business needs. |
| Tuesday April 27, 2010   | 1.5  | <b>HTML Website: Fixed</b> Rendering issues in IE only- compatibility view (resume.html + resume_highcontrast.html) (could not fix completely, it is much more complicated than I thought, IE has several modes).   |
| Wednesday May 19, 2010   | 0.75 | <b>HTML Website: Worked</b> on Osram Sylvania's Calculator.   |
| Friday June 25, 2010     | 4.25 | <b>HTML Website: Added</b> the 'Introduction to Joomla' and ' Shopping Cart Using PHP and MySQL' courses (resume, welcome, experience, portfolio).  |
|                          | 0.75 | <b>BLOG/HTML: Disabled</b> AddSense Account. It is not generating much money and also it looks unprofessional. <b>Updated</b> to WordPress 3.0.   |
| Saturday June 26, 2010   | 2.5  | <b>HTML Website: Added</b> 'Joomla!' and ' Shopping Cart (resources).   |
| Tuesday June 29, 2010    | 1.5  | <b>BLOG: Updated</b> the website (resume, resources). <b>Updated</b> my post (Testing and Validating a Website) to add new tools. <b>Optimized</b> several background images for a faster download of the website.  |
|                          | 1.25 | <b>FLASH Website: Miscellaneous</b> updates and fixes to the Website (portfolio, resume, experience)  |
| Thursday July 1, 2010    | 0.75 | <b>HTML Website: Added</b> JavaScript code to fix the PNG image transparency issue in IE6 (DID NOT WORK). <b>Removed</b> background images (they don't look good in IE6, also background display differently based on the monitor size).  |
|                          | 0.5  | <b>BLOG: Added</b> JavaScript code to fix the PNG image transparency issue in IE6 (DID NOT WORK EITHER?).   |
|                          | 2.5  | <b>GENERAL:</b> Learned about Minification of CSS and JavaScript code for faster download time.<br><i>Minification</i> is the practice of removing unnecessary characters from code to reduce its size, thus improving load times. When CSS/ <a href="#">JS code is minified</a> all comments are usually removed, as well as unneeded "white space" characters like space, new line, and tab. With respect to CSS, this <i>improves load time performance</i> because the size of the file downloaded is often significantly reduced. Two popular tools for <i>minifying CSS</i> code are <a href="#">JSMIn</a> and <a href="#">YUI Compressor</a> .   |

|                         |      |  |
|-------------------------|------|--|
| Tuesday July 6, 2010    | 0.75 | <b>HTML Website: Added</b> a new 'Minification' section in the resources page.   |
|                         | 1.25 | <b>BLOG: Added</b> a new section (MINIFICATION) for the resources.<br><b>Updated</b> my post (Testing and Validating a Website) to add new tools about Minification.<br><b>Added</b> the 'WP Minify' plugin ( <a href="http://wordpress.org/extend/plugins/wp-minify/">http://wordpress.org/extend/plugins/wp-minify/</a> )  |
| Friday July 9, 2010     | 0.25 | <b>HTML Website: Removed</b> the Google search box for the Website. I will replace it with a new PHP/MySQL search box in the top index page from ( <a href="http://www.sphider.eu/">http://www.sphider.eu/</a> ) that will display the results in the same website template.   |
| Tuesday July 20, 2010   | 0.5  | <b>HTML Website: Removed/Replaced</b> some invalid links in the resources page. Fixed the PNG issue for IE6 in the shopping cart project.  |
|                         | 1.5  | <b>BLOG: Removed/Replaced</b> some invalid links in the resources page.<br><b>Removed</b> one invalid link from my 'testing and validating...' post.<br><b>Tried to Fix</b> the transparency issue for IE6 for the PNG formatted Logo image. The JS Fix Failed, and the gif replacement image is of poor quality. Therefore I Will Try Another JavaScript Method.  |
| Thursday July 22, 2010  | 3.75 | <b>HTML Website: Added</b> the NEWEST website of Blue Olive Online to the portfolio. <b>Updated</b> the 'terms' page. <b>Miscellaneous</b> changes and updates to the website.<br><b>Added</b> a Master CSS Reset code. The reset code fixed a rendering issues in IE6/7 in the 'resume' page. See references:<br><a href="http://www.fldtrace.com/css/better-techniques-for-writing-css-and-markup#more-779">http://www.fldtrace.com/css/better-techniques-for-writing-css-and-markup#more-779</a><br><a href="http://meyerweb.com/eric/tools/css/reset/">http://meyerweb.com/eric/tools/css/reset/</a> |
|                         | 0.25 | <b>FLASH Website:</b> Updated the Portfolio page.  |
| Friday July 23, 2010    | 2.5  | <b>BLOG: Updated</b> my post (Testing and Validating a Website) to add new testing tools. <b>Added</b> an error message when JavaScript is disabled.<br><b>Removed</b> the contact form plugin it did not work with WP version 3?  |
| Saturday July 24, 2010  | 7.0  | <b>BLOG: FINALLY Fixed</b> the transparency issue for IE6 for the PNG formatted Logo image. Reference: <a href="http://www.twinhelix.com/css/iepngfix/">http://www.twinhelix.com/css/iepngfix/</a><br><b>Posted</b> a New Blog about IE6 PNG Hack.   |
| Sunday July 25, 2010    | 1.25 | <b>BLOG: Working</b> on a New Blog about "batch resizing images in PS CS3".  |
|                         | 3.0  | <b>HTML Website: Added</b> 'Google Custom Search' to the index page.   |

| Saturday October 30, 2010  | 3.0  | <b>BLOG: Working</b> on a new Blog post about: "How to Setup a Custom 404 Error Page"  |
| Tuesday November 2, 2010   | 6.25 | <b>BLOG: Edited</b> the Blog post: "Creating a Mobile Friendly Website..." + "301 redirect..."<br><b>Working</b> on a new Blog post about: "How to use gzip to compress your Website"<br><b>Installed</b> WP HTTP Compression plugin. This plugin allows your WordPress blog to output pages compressed in gzip format if a browser supports compression. HTTP compression generally means a 60-80% REDUCTION in the size of your pages (broadband usage) as well as an INCREASE in download speeds of 3x to 4x.<br><b>However;</b> using the tool at ( <a href="http://tools.pingdom.com/">http://tools.pingdom.com/</a> ) the load time of the main web page with and without hovered around 26.5 seconds even though the gzip compression is 79.3%. Therefore I <b>disabled</b> this tool since compression in my case did not improve load speed. In this case the only advantage would be saving on the bandwidth usage but I care less in my case. With WebWait tool ( <a href="http://webwait.com/">http://webwait.com/</a> ) the average time after 15 loads was around 12.0 sec. (Permanent link at <a href="http://webwait.com/ec">http://webwait.com/ec</a> ). Average for Blue Olive Online after 15 runs is 0.6 sec.<br><b>Problem Semi-Solved:</b> By reducing the number of posts displayed on the main page (from 10 to 5) I increased the page load speed by 20+%, now the average load time is about 10 sec. |
| Wednesday November 3, 2010 | 2.5  | <b>BLOG: Working</b> on a new Blog post about: "How to Setup a Custom 404 Error Page" (title could change)<br><b>Working</b> on a new Blog post about: "How to use gZip to compress your Website" (title could change)   |

| Thursday November 4, 2010 | 4.75         | <b>MAIN: Major</b> revamp to the main index.html (Flash, HTML, XML, extra optimized images) + other improvements.  |
| Friday November 5, 2010   | 0.25<br>4.5  | <b>HTML Website: Miscellaneous</b> updates (404 pages)<br><b>MAIN: Continue</b> -Major revamp to the main index.html.  |
| Saturday November 6, 2010 | 1.5          | <b>MAIN: Done</b> -Major revamp to the main index.html.  |
| Sunday November 7, 2010   | 2.5          | <b>HTML Website: Picture Gallery</b> Project: <b>Optimized</b> all images in the Gallery (also changed file extensions to jpg,) this also includes the folders in Blue Olive Online. This way they load much faster.   |
| Monday November 8, 2010   | 1.25<br>2.0  | <b>General: Major</b> updates to my profile on LinkedIn.<br><b>HTML Website: Minor</b> fixes to the Kyoto restaurant Website (Meta tags, e.g. response page, 404 page should always be noindex, noarchive). Did the same for <i>blueoliveonline</i> , <i>bacsoftwareconsulting</i> , and <i>saintannmaronite</i> .<br><a href="http://www.google.com/support/webmasters/bin/answer.py?hl=en&amp;answer=79812">http://www.google.com/support/webmasters/bin/answer.py?hl=en&amp;answer=79812</a><br>These meta tags can control the behavior of search engine crawling and indexing. The <b>robots</b> meta tag applies to all search engines, while the "googlebot" meta tag is specific to Google. <b>The default values are "index, follow"</b> (the same as "all") and do not need to be specified. Therefore, removed the meta tag in all Websites and important projects. |
| Tuesday November 9, 2010  | 5.25<br>0.25 | <b>HTML Website: Major</b> update of my resume (pdf, resume.html, cover letter) + other changes.<br><b>BLOG: Updated</b> my Resume page.   |
